

Laundry and Spot Cleaning

Ez-clean can be used as a pre-treatment, directly in the washing machine, or simply as a spray for items not able to go in the machine such as sporting equipment or boots.

Ez-clean is a **live** bioenzyme product and should not be used with anti-microbial products. Also please note that the steam cycle on a washing machine will kill ez-clean.

Application of ez-clean

PRETREAT – BEFORE WASHING :

- Apply ez-clean full strength directly to the stain prior to washing. Do not let the solution dry out. For heavily soiled or older stains, you may want to let your item soak in a 1:10 mixture with water prior to washing.
- If the issue is smell, you can presoak the item in a bucket of ez-clean that is diluted 1:32.

LAUNDRY – IN THE WASHING MACHINE :

- Put 1 to 2 ounces of ez-clean into the bleach or soap compartment of the washing machine. It can either be mixed with your current detergent or used by itself.

ITEMS NOT SUITABLE FOR THE MACHINE :

- Spray ez-clean full strength. Cover with plastic wrap to keep it moist longer while the bioenzymes work. Let dry - No rinsing is required.

Additional Information

- If chemicals were previously used to try to clean a stain, you must rehydrate the stain with water and blot dry to remove any residual chemical that may still be left on the stain.
- Ez-clean is safe on virtually every fabric. The only issue that might occur is on fabrics that are naturally dyed with products such as beet juice.
- Added Bonus : Spray the inside door rim of your front load washer! Ez-clean will remove mildew smells from trapped fluid and items in the seal.

ez-clean uses

- dog run and kennels
- decks
- fences
- barns
- stock trailers
- vehicles
- mattress stains
- medical scrubs
- organic carpet stains
- organic upholstery stains
- garbage cans
- sport equipment
